SUMMARY

Full-stack engineer with 7+ years shipping production systems across React, Node.js, Python and .NET. Currently core developer on a flagship industrial gas-monitoring platform, where I own geospatial data-visualization, real-time instrument-facing applications, reporting pipelines and release delivery across seven microservices. Experienced in AI-augmented development with Claude Code and Cursor, multi-repo agent orchestration and agentic workflows. Open to senior full-stack and AI engineering roles.

SKILLS

Languages: JavaScript, TypeScript, Python, Go, C#, SQL
Frontend: React, Next.js, React Native / Expo, D3.js, OpenLayers, Tailwind, Material UI
Backend: Node.js, Express, Flask, FastAPI, ASP.NET MVC, Django, AdonisJS
Databases: PostgreSQL, PostGIS, MSSQL, MongoDB, Redis
Infra & Tools: Docker, AWS Lambda, SignalR, WebSockets, BullMQ, Celery, Keycloak, Git, Jest, PyTest, Playwright
AI & Agents: Claude Code, Cursor, LangChain, LoRA fine-tuning, Hugging Face, OpenAI APIs

EXPERIENCE

Software Engineer (Core Dev, Frontend & Backend) — Picarro Inc. Apr 2025 – Present

- Owned end-to-end delivery of handheld sensor-data visualization on maps and reports — service-layer integration, rendering performance for 10k+ point datasets, export packaging and per-customer feature licensing.
- Built real-time driver-facing and observer-facing survey applications from POC to production in React/TypeScript — live instrument integration over SignalR, session history, capture mode and 13-language internationalization.
- Delivered investigation-workflow and reporting enhancements across an ASP.NET MVC / C# / MSSQL platform — new disposition states, server-side filtering and pagination, DB migrations, and licence-gated PDF and CSV report generators backed by Python/Flask workers.
- Improved platform security — remediated JavaScript dependency vulnerabilities, hardened SSO identity-provider validation and CSRF handling.
- Led a 5-engineer backend and QA team through three production releases; managed the release train across seven microservices (120+ version updates). 146 merged PRs on the core platform.
- Co-developed LogicGas AI at a company-wide hackathon using Phi-3, LoRA and FastAPI.

IT Analyst / Full-Stack Developer — TCS (Hertz & EHI) Jul 2022 – Apr 2025

- Built full-stack features with React, Node.js, Flask and PostgreSQL; maintained REST APIs and test suites. Led React UI initiatives, maintained 99% uptime, received Performance Band 'A'.
- Migrated legacy React systems and resolved 400+ production issues using React, TypeScript, Node.js and AWS Lambda.

Software Engineer — Deepcompute (Nference) Oct 2018 – Jun 2022

- Led frontend engineering for medical-research and clinical-trials platforms. Built scalable Flask/PostgreSQL services and React SPAs with custom D3 visualizations.

SELECTED PROJECTS

HiringHuman — service-hiring marketplace with live location and chat. React/Vite, FastAPI gateway, C++ CGI services, Postgres, Redis, Socket.io, Expo.

Real-Time Market Data Platform — multi-feed ingestion with normalized APIs and sub-second updates; agent-orchestrated across provider repos.

Yevacure — pharma platform built with React 19, Vite, Tailwind and Claude Code workflows.

EDUCATION & CERTIFICATIONS

M.Tech, Software Systems — BITS Pilani (Work Integrated), 2022–2024	AWS Certified Developer – Associate Generative AI Agile Practitioner
B.E., Computer Science — NMAM Institute of Technology (VTU), 2014–2018
