SUMMARY

Full-stack engineer with 8 years shipping production systems across React/Next.js, Node.js, Go, Python and .NET. Core developer on a flagship industrial gas-monitoring platform (legacy and next-generation stacks), owning geospatial visualization, real-time instrument-facing applications, reporting pipelines and release delivery across seven microservices. Outside work, owner of a white-label exchange platform live in production since July 2026. Experienced in AI-augmented development with Claude Code and Cursor, multi-agent orchestration and agentic workflows. Open to senior full-stack and AI engineering roles.

SKILLS

Languages: JavaScript, TypeScript, Python, Go, C#, SQL

Frontend: React, Next.js, Redux Toolkit, React Native / Expo, D3.js, Mapbox GL, OpenLayers, Tailwind

Backend: Node.js, Go, Express, FastAPI, Flask, ASP.NET MVC / Core, Django, Spring Boot

Databases: PostgreSQL, PostGIS, MSSQL, MongoDB, Redis, Supabase, Liquibase

Infra & Tools: Docker, Terraform, AWS, DigitalOcean, SignalR, WebSockets, Centrifugo, ZMQ, Celery, Keycloak, GitHub Actions, Jest, PyTest, Playwright

AI & Agents: Claude Code, Cursor, LangChain, LoRA fine-tuning, Hugging Face, OpenAI APIs

EXPERIENCE

Software Engineer (Core Dev, Frontend & Backend) — Picarro Inc. **Apr 2025 – Present**

- Core developer across the legacy ASP.NET MVC / C# / MSSQL platform and the next-generation cloud stack (Next.js 15, React 19, FastAPI, PostgreSQL): 1,280+ commits across 8 repositories, 146 merged PRs on the core platform.
- Led the full-stack timezone-localization initiative across UI, API and database (user → operator → tenant → UTC resolution chain, IANA zones, timezone-aware campaigns, reports and fleet maps) — the largest cross-repo delivery on the platform.
- Built real-time driver- and observer-facing survey applications from POC to production in React/TypeScript — live analyzer integration over SignalR and ZMQ, capture mode, session history, completion summary, live observer sync and 13-language i18n.
- Owned geospatial sensor-data visualization (10k+ point datasets), investigation workflows and licence-gated PDF/CSV reporting with Python/Flask/Celery workers; added server-side filtering, pagination, DB migrations and per-customer licensing.
- Hardened security (dependency remediation, SSO, CSRF); built a ZMQ ingestion simulator for hardware-free QA.
- Led a 5-engineer backend and QA team through three production releases; ran the release train across seven microservices (120+ version updates). Co-developed LogicGas AI (Phi-3, LoRA, FastAPI) at a company hackathon.

IT Analyst / Full-Stack Developer — TCS (Hertz & EHI) **Jul 2022 – Apr 2025**

- Built full-stack features with React, Node.js, Flask and PostgreSQL; maintained REST APIs and test suites. Led React UI initiatives, maintained 99% uptime, received Performance Band 'A'.
- Migrated legacy React systems and resolved 400+ production issues using React, TypeScript, Node.js and AWS Lambda.

Software Engineer — Deepcompute (Nference) **Oct 2018 – Jun 2022**

- Led frontend engineering for medical-research and clinical-trials platforms. Built scalable Flask/PostgreSQL services and React SPAs with custom D3 visualizations.

SELECTED PROJECTS

UXC (white-label sports exchange, live Jul 2026) — owner of backend, three frontends, infra and QA. 8-level agent hierarchy, Redis + Centrifugo live odds, signed-webhook auto-settlement with rollback and audit, Terraform AWS → DigitalOcean migration, 629-test Playwright suite.

JeetExch & Jhandi Munda — Go rebuilds: multi-tenant exchange with commission cascade and settlement safety; 9-game Android platform on a Blnk-ledger wallet with outbox and signed money events. 100+ ADRs; built via a Claude Code / Codex multi-agent worktree workflow I designed.

Real-Time Market Data Platform — multi-feed ingestion with normalized APIs and sub-second updates; agent-orchestrated across provider repos.

HiringHuman, Yevacure — services marketplace (React, FastAPI, Postgres/PostGIS, Expo) and pharma web + field-force app (React 19, Expo, Supabase with row-level security, offline sync).

EDUCATION & CERTIFICATIONS

M.Tech, Software Systems — BITS Pilani (Work Integrated), 2022–2024

B.E., Computer Science — NMAM Institute of Technology (VTU), 2014–2018

AWS Certified Developer – Associate

Generative AI | Agile Practitioner
